AI-POWERED B2B SUPPLIER INTELLIGENCE PLATFORM

import.me

Semantic Supply Chain Intelligence

48-HOUR HACKATHON | 14 HOURS CODING | TEAM ROCKET

> *"A supply chain manager spends 3 months finding a manufacturer. A designer spends weeks verifying if a supplier is real. A business development team wastes 40% of its time on manual research. When that relationship finally forms, 70-85% of the value goes to middlemen. The manufacturer takes home 15-30%. This is not a failure of effort. This is a failure of discovery infrastructure."*

THE PROBLEM

Supply Chain Discovery Is Broken

01

Discovery Takes Months

Average time to find a qualified supplier: 2-3 months. 40% of sourcing workflow is manual research. Supplier databases update once per quarter. Results are flooded with unverified data.

02

Tools Were Built Before AI

Google search doesn't understand supply chain intent. LinkedIn is a network, not a discovery tool. Alibaba is a marketplace optimized for wholesale, not informed decisions.

03

Real Data Is Fragmented

No centralized, queryable index of live supplier capabilities. Contact info is scattered or hidden. Geospatial sourcing requires manual map research. Quality signals are unstructured.

04

Middlemen Dominate

Bulk of buyer-supplier contact happens through brokers and agents. Direct manufacturer relationships are rare. Small buyers can't afford to source directly — middleman fees become unavoidable.

THE SOLUTION

Semantic Supply Chain Intelligence

When a buyer says "I need a textile manufacturer in Pakistan who specializes in technical fabrics, uses sustainable dyes, and can handle 500-piece orders" — we don't return a list. We parse intent via Gemini NLP, extract live data via Apify, rank by vector embeddings + cosine similarity, score supplier quality, surface contacts, verify geographically, and deliver a ranked annotated list in under 10 seconds.

THE ARCHITECTURE

Three Layers. One Flywheel.

INTELLIGENCE ENGINE

01

Transform unstructured web data into queryable supplier profiles via AI extraction, semantic ranking and live scraping.

Apify | Gemini NLP | Embeddings | Normalization

DISCOVERY & RANKING

02

Semantic search, live filtering, quality scoring, contact extraction, and geospatial visualization for precise matching.

Cosine Sim | Leaflet Maps | Quality Score

COMPARISON & ACTION

03

Side-by-side analytics, metrics dashboard, contact outreach interface, and exportable reports to close deals fast.

Email Extract | Outreach | Analytics

e Engine creates normalized data → Discovery & Ranking turns data into actionable intelligence → Comparison & Action closes the loop → System improves with e

COMPETITIVE LANDSCAPE

Why Existing Platforms Fail

Platform	What It Does	Why It Fails
Google / Bing	Full-text web search	No supply chain intent; returns marketing fluff, not verified capabilities
Alibaba	Marketplace aggregation	Flooded with low-quality suppliers; takes 70-85% margin; no verification
LinkedIn	Professional network	Requires connections; doesn't scale for cold outreach; no verification
Directories	Static curated lists	Updated quarterly; no semantic search; no contact extraction
ChatGPT	General AI Q&A	No live data; hallucinates supplier info; not built for supply chain
import.me ✓	**Semantic intelligence**	**Real-time data + Semantic NLP + Vector ranking + Contact extraction**

RISK MITIGATION

What Could Break & How We Protect It

Gemini Rate Limiting
MEDIUM

Pre-cached query results, fallback to mock inference

Apify Incomplete Data
MEDIUM

Demo dataset is pre-scraped and verified before demo day

Next.js Build Fails
LOW

Local artifacts cached; deploy tested 3x

Map Doesn't Load
LOW

Static image fallback; all demo data stored locally

Contact Parse Errors
MEDIUM

Manual validation of emails; confidence scores displayed

No Internet on Stage
HIGH

Entire demo runs offline — zero external dependencies

48-HOUR BUILD TIMELINE

48 Hours. 14 Hours of Coding.

0–4 hrs	4–9 hrs	9–12 hrs	12–14 hrs
Foundation	**Vertical Slice**	**AI Integration**	**Full Stack**
Setup architecture schema lock	Query → ranking → results mock data	Gemini NLP semantic ranking live scraping	Contact extraction geospatial UI polish

CLOSING

Seconds. Not Months.

> *"Right now, somewhere in Southeast Asia, a textile manufacturer has the exact capacity, quality, and certification a buyer needs — but they'll never meet because discovery infrastructure broke down somewhere in 1995 and nobody fixed it. import.me fixes it. In 14 hours of a 48-hour hackathon, we proved the concept works. Now we're asking to build it."*
